Directories and contents

Updated January 27, 2014

This document lists the various types of information available for downloading from Nord Pool’s ftp server for UK market. Access to the ftp server is by subscription and/or by a special agreement.

The contents of the ftp server are listed according to the structure of the server’s file directory. Most of the files are available in both .xls (Excel spreadsheet) and .csv formats (text format).

The year/date designation for recorded data is generally part of the file name, according to the convention: yy = year, mm = month, ww = week, dd = day. Data for previous years are found in own “Years” subfolders; yyyy = year.

All catalogues have English names and have been organized in folders together with interrelated files.

If you have any questions regarding this ftp-server, please contact pds@nordpoolgroup.com.
